

Corrosion is the deterioration of a metal or alloy due to interaction with its environment. Corrosion can occur in both low and elevated temperature environments.

The Hendrix Group Inc. has been providing corrosion consulting, corrosion prevention, and corrosion control services to business, industry, insurance, and legal companies and government for more than 14 years.

Our objective is to provide a quality service at a reasonable price, to develop practical solutions to clients' corrosion problems, and to work with our clients as a team. The Hendrix Group has built a nationwide reputation for the quality of its corrosion and failure analysis services as well as its cost-effective solutions.

We have investigated thousands of failures due to corrosion and/or mechanical means. The practical, experience-based backgrounds of our corrosion engineers qualify us to investigate a full range of corrosion problems across different industries.

The Hendrix Group's professional staff is backed up by the capabilities of a full-service chemical, mechanical, and corrosion testing laboratory.

If something has failed due to corrosion, we have probably seen it.
